IT’S ALL IN YOUR BRAIN

Presented for NIEAPA Conference • Oak Brook, IL • June 6, 2017
Tatyana Fertelmeyster, MA, LCPC • Connecting Differences, LLC

Meet Your Presenter

Tatyana Fertelmeyster, MA, LCPC, founder and principal of Connecting Differences LLC is a nationally and internationally recognized expert in Intercultural Communication, Diversity and Inclusion. Tatyana specializes in assisting leaders and teams in navigating complex intercultural, interpersonal, and intrapersonal processes. Her unique technique of Spontaneous Facilitation allows her to work with individuals and groups with maximum concentration on the reality of the present moment. She leads her clients in arriving at deeper levels of insight and the development of practical and sustainable skills.

BRAINSTATES™, SELF-AWARENESS AND CONSCIOUS CHOICE

TRIUNE / EVOLUTIONARY BRAIN
The brain evolved in three main stages:
- The Neocortex (Higher Brain)
- The Limbic Region (Middle Brain)
- The Stress/Threat Response (Reptilian Brain)

BrainStates Management™ Model

Percent of web respondents with each score

- Strong automatic preference for able-bodied people compared to disabled people: 37%
- Moderate automatic preference for able-bodied people compared to disabled people: 27%
- Slight automatic preference for able-bodied people compared to disabled people: 14%
- Little to no automatic preference between able-bodied and disabled people: 14%
- Slight automatic preference for disabled people compared to able-bodied people: 5%
- Moderate automatic preference for disabled people compared to able-bodied people: 3%
- Strong automatic preference for disabled people compared to able-bodied people: 1%

This distribution summaries 30,136 IAT scores for the disability task completed between April 2004 and December 2015.
Conformity Bias
Similarity Bias

- **Our Perception** – how we see people and perceive reality.
- **Our Attitude** – how we react towards certain people.
- **Our Behaviors** – how receptive/friendly we are towards certain people.
- **Our Attention** – which aspects of a person we pay most attention to.
- **Our Listening Skills** – how much we actively listen to what certain people say.
- **Our Micro-affirmations** – how much or how little we comfort certain people in certain situations.

Effects of **Unconscious Bias**
Is There Hope for Us?

There is little hope for us until we become tough-minded enough to break loose from the shackles of prejudice, half-truths, and down-right ignorance.

— Martin Luther King —

Neuroplasticity

The power of brain training means that the brain can not only learn new tricks, it can actually restructure itself, even in old age.

Neuroplasticity promises remarkable new therapies for mental illness and addiction.

From Buddhist monks to London taxi drivers, whether trying to overcome addiction or learn a new language, we can all harness the power of neuroplasticity and rewire our brains.
